

Ahmed Nizhan Haikal

Backend & Full-Stack Developer

Jakarta, Indonesia | +62 851-5627-1326 | ahmed.nizhan@gmail.com | nizhan.dev | linkedin.com/in/nizhan-haikal | github.com/InMyDream21

SUMMARY

Full-Stack & Backend Engineer with extensive experience architecting event-driven microservices, high-throughput APIs, and distributed data systems using .NET Core, Java Spring Boot, Node.js/Bun, and PostgreSQL/PostGIS. Proven track record of scaling logistics and enterprise platforms to 5,000+ daily orders and implementing secure RBAC, asynchronous messaging via RabbitMQ, and geospatial indexing. CS graduate (3.87 GPA) and Apple Developer Academy alumnus experienced in cross-functional agile teams.

WORK EXPERIENCE

Sagara Technology
Fullstack Developer (Outsource at Treffix) · Full-time

May 2026 - Present
BSD, Indonesia

- **Scaled end-to-end logistics platform throughput** to handle 5,000+ daily active orders by engineering a high-performance backend with ElysiaJS/Bun and a React 19 (TanStack Start) frontend in a pnpm monorepo.
- **Boosted routing efficiency and delivery precision** by extracting historical tracking data and dynamically calculating GraphHopper via-points between designated route stops.
- **Optimized spatial query latency for real-time fleet positions and boundary triggers** by architecting geospatial schemas in PostgreSQL/PostGIS using Prisma.
- **Strengthened client-side session security** by building a cross-tab synchronized JWT authentication system using native Web Crypto APIs with silent token refresh.
- Enhanced user experience through a localized, responsive dashboard featuring real-time data visualization and simplified workflows.

K-Appraisal
Software Developer · Full-time

Feb 2026 - Apr 2026
Jakarta, Indonesia

- **Architected scalable enterprise microservices** across core business domains using ASP.NET Core and React, decoupling monolithic workflows into maintainable distributed services.
- **Decoupled high-volume asynchronous tasks** by implementing event-driven message queuing with RabbitMQ, preventing workflow bottlenecks and ensuring eventual consistency across services.
- **Hardened enterprise API security** by engineering fine-grained Role-Based Access Control (RBAC) and JWT validation across all service entry points.
- **Automated reporting workflows** by building a dynamic PDF generation engine supporting customized business templates, eliminating manual report assembly.
- **Enhanced data reliability and transaction integrity** by normalizing relational database schemas and establishing structured repository patterns in C#/.NET.

Apple Developer Academy
Apple Platform Developer · Internship

Mar 2025 - Dec 2025
South Tangerang, Indonesia

- **Shipped production-grade native iOS/iPadOS applications** utilizing Swift, SwiftUI, and SwiftData, prioritizing reactive UIs, data persistence, and fluid user interactions.
- **Drove end-to-end product delivery cycles** within an agile environment, iterating from rapid interactive prototyping and user research to final app builds.
- **Architected cloud-based backend services and REST APIs** leveraging FastAPI and Supabase for real-time data synchronization.

Alto Network
Backend Developer · Internship

Sep 2024 - Dec 2024
Jakarta, Indonesia

- **Engineered robust RESTful backend services and reporting systems** with Java Spring Boot to facilitate secure, high-integrity financial network data processing.
- **Accelerated developer onboarding and feature delivery** by creating standardized ERD and DFD technical documentation across complex integration touchpoints.
- **Collaborated cross-functionally to ensure strict data accuracy**, system reliability, and seamless API integrations.

Bakrie Center Foundation
Software Engineer · Internship

Feb 2024 - Jul 2024
Jakarta, Indonesia

- **Led technical project execution and team delivery** as PIC, coordinating sprint milestones, conducting code reviews, and aligning business requirements with engineering output.
- **Architected normalized MySQL database schemas** to secure mission-critical data models and minimize transactional redundancy.
- **Developed scalable Node.js REST APIs** to power core institutional application workflows and streamline client-side data access.

SELECTED PROJECTS

Medical Visual Question Answering **Freelance Full-Stack Developer**

- Developed a medical visual question answering system using TensorFlow. Implemented a custom image upload interface and integrated with a medical knowledge base API to provide accurate answers to medical questions. (Python, TensorFlow, Medical AI, Fullstack Development)

Contraction Timer iOS App **Freelance iOS Developer**

- Designed and developed a native iOS utility app with a highly reactive UI for calculating contraction frequency. Features include custom tab views and intuitive swipe actions for editing and deleting records. (SwiftUI, Reactive UI, Mobile Development, UX/UI)

SKILLS

Backend & APIs	C#	.NET	Node.js	Java	Spring Boot	Python	FastAPI	Go
Frontend & Mobile	React	TypeScript	TanStack	Tailwind CSS	Swift	SwiftUI	SwiftData	
Database & Architecture	PostgreSQL	MySQL	Prisma	Supabase	RabbitMQ	Microservices		
Soft Skills & Leadership	Leadership	Communication	Problem Solving	Team Collaboration				

EDUCATION & AWARDS

Universitas Pembangunan Nasional Veteran Jakarta
Bachelor of Computer Science · GPA 3.87 / 4.0

Aug 2021 - Sep 2025
Jakarta, Indonesia

Gemastik Finalist
Top 10 nationally in Kemendikbudristek's Gemastik IT competition

Nov 2022
Project: ANKERSAL (Bootstrap, PHP)
